SUBJECT INDEX

aerofoils
  FX69–H–098 277
  NACA 0012 275, 276, 277, 278–279, 280–282
  NACA 63 305
  RAE 2822 275, 276, 277, 279, 283–285
  VFW–VA–2 282, 284–285, 287–290
Airbus 297, 304–305, 324
aircraft *see* variable wing camber
anti-aircraft shell, sonic boom 183–184

Boeing 299
Boeing 727 304
boundary layers *see* turbulent boundary layers, viscous flow, shock–boundary layer interaction
British Aerospace 299

computational fluid dynamics 107–129

delta wings *see* vortex breakdown
DFVLR Göttingen 276

EUROVISC 108

flow instability *see* viscous flow
flow visualisation *see* turbulent flow

gas plasma, multi-component 1–42
  equation of state 4–5
  thermophysical properties 4–16
    chemical equilibrium 5–16
    free enthalpy 5–12
    reaction rates 11–12
    single temperature plasma 7–8, 13
    two temperature plasma 8–11, 13–15
  transport properties, two temperature plasma 16–40
    charged particle collision 22
    collision cross-sections 17–22
    diffusion 26–34
    electrical conductivity 25–26, 32–33
    electron-neutral collision 19–20
    heat conductivity 23–26, 34–36
    ion-neutral collision 20–22
    Lennard–Jones potential model 17–18, 21–22
    neutral–neutral collision 17–19
    viscosity 22–24
    volumetric collision frequency 16–17

NASA 299–304

passive control *see* shock–boundary layer interaction
plasma *see* gas plasma

shock-boundary layer interaction, passive control 271–296
  boundary layer development 280–282
  buffet boundaries 272, 287, 290
  cavity depth 294–295
  drag 272–273, 282–286, 288–289, 295
  experimental methods 274–276
  flow field effects 276–290
  flow separation 272–273
  lift 286, 288–289
  models 274–276
  porosity 291–293
  porous surface 273–276, 293–294, 295
  pressure fluctuations 287–290
  shock strength 290
  shock wave splitting 279–280, 281
  surface pressure distribution 276–279, 293
  wake profiles 286
shock waves, reflection 329–412
  Mach reflection 330–334
  pseudo-steady flows 340–378
    complex-Mach reflection 340, 342–344
    domain boundaries 358–361
    double-Mach reflection 340, 344–346, 356–358
    Galilean transformation 340
    models 361–374
    nonself-similarity effects 372–374
    real gas effects 361–364
    regular reflection 340–341
    single-Mach reflection 340, 341–342
    surface conditions 374–378
    thermal conduction effects 371–372
    transition criteria 346–349
    triple point trajectory angles 349–356
    viscous effects 364–371
  regular-Mach transition criteria 334–339
  regular reflection 330–334
  steady flows 379–387
    curved incident shock wave 379–381
    curved wedge reflection 380–381
    domain boundaries 383–384
    models 385–387
    real gas effects 386–387
    straight incident shock wave 380–384
    straight wedge reflection 379–380, 381–384
    thermal conduction effects 386
    transition criterion 383
    triple points 387
    viscous effects 385–386
  unsteady flows 387–409
    blast wave reflection 407–409
    constant velocity shock reflection 388–407
    cylindrical concave surface 388–399
    cylindrical convex surface 399–402
    domain boundaries 403–407, 408–409
    double wedge reflection 402–407
    inverse-Mach reflection 398–399
    Mach-regular transition 389–390, 391–393, 394, 403–407
    models 390–399, 402

nonconstant velocity shock reflection 407
pseudo-steady shock polars 396–398
regular-Mach transition 400–402, 405–407
surface roughness effects 390, 401–402
triple point trajectory angles 393–399
sonic boom, from supersonic projectiles 131–188
acoustic miss distance indicators 133–134, 186–187
F-functions 142–187
non-axisymmetric bodies 152–154, 178–187
afterbody flows 153–154
blunt bodies 152–153, 178–184
boundary layer growth 153
flow separation 153
free-flight projectiles 178–184, 185–187
Whitham's method 153–154
overpressure signatures 132–187
shock-wave disturbance 132–133
slender axisymmetric bodies 134–152, 154–164
analytical solutions 154–164
cone-cylinder body 172–176
double cone–cylinder body 176–178
first-order theory 138–144, 184–185
free-flight projectiles 178–184, 185–187
intermediate shocks 162–164
Lighthill's F-function 144–146, 147–148, 151–152, 164–184, 185
mid-field decay laws 159–160
modified F-functions 146–147, 164–184, 185
N-waves 162–164, 167–168, 185
parabolic-arc spindle 164–172
perturbation-potential theory 136–137
right-cylinder cone 156–159
scaling 160–162, 185
slope discontinuities 144–146, 185
small perturbation theory 138–144
smooth bodies 144, 146–151
Witham's method 137–138, 140–144, 146–147, 148–151, 155–156, 164–184, 185
supersonic projectiles *see* sonic boom

transonic flow *see* shock–boundary layer interaction
transport aircraft *see* variable wing camber
turbulent boundary layers, three-dimensional 107–129
Boussinesq assumption 121–122, 124
calculation methods 109–116
Cebeci/Huang 110, 118, 121, 124
Cousteix/Berrue 109–110, 118, 119, 120–121, 122, 124
Cross 109–110, 118, 120
Galmes/Lakshminarayana 115, 118, 119, 121, 123, 125–126
Gibson/Younis 115–116, 118, 126–127
Hoekstra 112–113, 118, 121, 124
Humphreys 111, 118, 122, 124
Lindhout/de Bruin 113–114, 119, 121, 124
Müller 112, 118, 121, 124
Nakkasyan 111–112, 118, 122, 124
Patel/Krogstad/Baek 113, 118, 121, 124
Pierce/Aguilar/Treventi 114–115, 118, 121, 124
Schneider 110–111, 118, 122, 124
Smith 109–110, 118, 120
eddy viscosity 122–124, 127
empirical relations 119–127
entrainment 121
finite difference molecules 116–119
integration algorithms 116–119
mixing length 124–125
skin friction laws 120–121
solution procedures 116–119
transport equations 125–126
velocity profiles 120
wall functions 126–127
turbulent flow, coherent structures 231–269
channel flow 256
chaos theory 232, 237, 263–264
conditional averaging 242
dynamics 243–244, 245
entrainment 257
experimental analysis 239–243
free jets 248–252
manipulation 257–259, 260
mixing length 232, 244–248, 249–250
models 259, 261–263
morphology 238–239
origins 237–238
pattern recognition 242–243
pipe flow 256
Townsend model 232–233
visualisation 233–237 240–242
vortices 238–239, 246–248, 249–250
wake 252, 253
wall-boundary layer 252–256, 264

United States Transportation and Safety Board 304
UTIAS, Toronto 359

variable wing camber, transport aircraft 297–328
Advanced Technology Wing 300
aerofoil tests 306–310
automatic control system 326–327
design improvements 310–320
discrete variable camber 304
Flight Management System 322–323
fuel consumption 297, 304, 326
historical concepts 298–304
lift-to-drag ratio 304–310, 311–314, 317–320
military applications 298–304
Mission Adaptive Wing 299–304
new advanced wing concept 314–320
payloads 310–314, 326
performance efficiency 323–324
research 310–314
NEW 1 310–313
NEW 2 313–314
trailing-edge devices 315–317, 320–323
linkage system 321
system requirements 320–323
track system 321
transonic flow 306–320
two-dimensional flow 305–310
wind tunnel tests 309–310
wing–engine integration 324–325
viscous flow, near rotating bodies, 43–103
circular cylinders 81–86
Couette flow 83–84
Görtler vortices 81–83, 85–86
Taylor vortices 83–84
through-flow 84
vortex wavelength 83–86
vortices 81–86, 99
combination of bodies 94–98
geometric parameters 94–98
Taylor vortices 94–98
vortex wavelength 96
cones 86–94
meridional flow 89–93
spiral flow 88–93, 100
streamlines 89
Taylor–Görtler vortices 86, 99

vortex wavelength 92
vortices 86–93, 99, 100
discs 70–81
spiral flow 73–81, 100
streamlines 71–77
through-flow 78–79, 100
vortex wavelength 77
vortices 70–81, 100
rotating systems 44–45
spheres 46–70
boundary layer development 66–70
Couette flow 47, 60
friction torque 55–56, 58–60
meridional flow 61–64
spiral flow 49–50, 60–61, 100
steady flow 64–66
Taylor instabilities 63–64
through-flow 60–61
unsteady flow 66–70
vortex wavelength 58–60
vortices 48, 50–57, 60–61, 99, 100
vortex breakdown 189–229
drag 190–191
flow systems 192–195, 196–197
flow visualisation 203–208, 210
laser-Doppler anemometry 201–202, 208–210
lift 190–191
non-dimensional parameters 193–195
pitching moment 190–191
theories 210–225
Benjamin's conjugate-state theory 220
critical equation 219–220
equations of motion 215–216, 218–224
flow stagnation 215–217
profile forms 211
Squire's theory 218–219
two-stage transition 220–225
vortex stability 211–215
wave-motion theories 218–225
vortex flows 192–202
Vought Corporation 229–300

wings, variable camber *see* variable wing camber
